A MARRIAGE OF FORM AND FUNCTION

Screening systems have been a practical component of architectural design for centuries, but up until recently they have not been thought of as architectural features. Architects are continually pushing the boundaries of building materials to achieve both functional and aesthetic results. This creative approach capitalizes on the efficiency and economy of common building materials, while incorporating them into a stunning design. The marriage of high functionality and striking aesthetics demands careful selection of materials that not only facilitate the design, but also deliver the desired performance while meeting the budget.

Kovach’s collaboration with industry-leading designers and architects has produced unique screening solutions that have transformed parking garages and screen walls into design statements. We are consistently approached by architects based on our ability to customize materials by providing different shapes, sizes and variations (alloys, materials) than what are commercially available. As a key part of the design-build team, Kovach will have visibility on any potential changes in design that could compromise the budget, in such a case, we will address the issue before it can materialize. We are here to help take a designer’s vision from dream to reality.
Project
Marina Heights Parking Garage
Tempe, AZ

Material Summary
Perforated Scrim Panels
- .125 Aluminum Plate - Mill Finish
- 14 panel layouts
- Perforations ranging from 1-1/4” to 2-1/2” diameter
UNITIZED STONE
CUSTOM DESIGN CATALOG

Project
Banner MD Anderson Cancer Center  Gilbert, AZ

Material Summary
The tree design in the lantern was cut from 1/2” aluminum plate with a water jet. The oversized 8’ x 20’ panels were then blasted with a copper slag that will patina beautifully over time.
Project
Block M at Scottsdale Quarter, Scottsdale, AZ

Material Summary
Acrylic Panel
- Backlit 3form System
Aluminum Fins
Perforated Aluminum Screen
Project
Boyer Parking Garage  Tempe, AZ

Material Summary
Custom Perforated Panels
• .080 & .063 Aluminum

Although every panel is the same color, the varied angles of installation create the appearance of different colored panels while adding texture.
Project
Tobin Center For The Performing Arts
San Antonio, TX

Material Summary
Custom Veil System
- Over 12,000 .063 Aluminum Panels
- Designed to integrate with LED system
